PROFESSIONAL EXPERIENCE

YUDIZ SOLUTIONS **May 2025 - Aug 2025**

Software Engineering Intern *Ahmedabad, India*

- Developed a machine learning object detection system in Python using YOLO and PyTorch, achieving 89% accuracy at 30 FPS through iterative experimentation.
- Deployed containerized services on AWS infrastructure using Docker, EC2, S3, and CloudWatch.
- Collaborated with engineering teams to integrate systems and build RESTful APIs; presented technical findings and implementation strategies to stakeholders.
- Participated in weekly technical seminars and code reviews, explaining algorithmic concepts to technical and nontechnical audiences.
- Technologies: Python, Java, Docker, AWS (EC2, S3, CloudWatch), Linux, GitHub Actions, CI/CD, MySQL.

PROJECTS

FOUNDATIONDB-KAFKA CDC BRIDGE - CAPSTONE **Aug 2026 - Present**

github.com/Ronitsabhaya75/Kafka-FDB-Streamline

- Python, FoundationDB CDC, Apache Kafka, Protobuf, Prometheus, Docker, GitHub Actions
- Hardened a team-developed CDC bridge with merged recovery fixes: checkpoint the FDB cursor before acknowledgment, enforce stable partition keys for version-group ordering, and retry retriable Kafka transaction commits.
- Added bridge unit tests, live Kafka partition-placement checks, and a test-bridge GitHub Actions job to verify checkpoint, delivery, and ordering behavior in CI.
- Designed and implemented observability in authored pull requests: Prometheus metrics, /healthz, /readyz, and /metrics on port 9102, structured VersionEnd audit logs, and telemetry CI checks.
- Implemented and submitted a daemon runner with CLI and environment configuration, a poll-produce-acknowledge loop, and graceful shutdown on SIGINT and SIGTERM.
- Contributed to CDC correctness documentation and consume/ack error handling; documented deliberate acknowledgment of idle replies and opened an optimization issue for idle-ack coalescing.

TEXTILESFLOW ERP - FAMILY TEXTILE-MILL SAAS **Jun 2026 - Present**

github.com/jitusaspara/TextilesFlowErp (private repository)

- Flutter, Dart, Provider, Node.js, MySQL, REST APIs, GitHub Actions, GitHub Pages
- Collaborated with my father on a textile-mill ERP spanning web, Android, and Smart TV, with production tracking, GST billing, accounting, and live loom telemetry.
- Worked with the Flutter client and Node.js/MySQL REST API for a family product used in production at a Surat weaving mill.
- Set up a personal staging environment at textilesflowerp.saspara.com using a separate branch and GitHub Actions deployment to GitHub Pages, isolated from the live customer portal.
- Explored the factory IoT data flow from ESP32-S3 Modbus gateways through the cloud API to live machine dashboards.

JWKS AUTHENTICATION SERVER - COMPUTER SECURITY COURSEWORK **GitHub**

- Python, FastAPI, SQLite, JWT/JWKS, RSA, Argon2, pytest
- Built a FastAPI/SQLite server publishing JWKS public keys and issuing RS256-signed JWTs with key IDs and expiry handling.
- Implemented AES-256-CBC private-key encryption, Argon2 password hashing, user registration, request logging, and a 10 requests/sec per-IP limit.
- Added pytest tests for token verification, expired keys, duplicate registration, encrypted storage, and rate limiting.

Education

Bachelor of Science, Computer Science **Aug 2024 - Expected May 2027**

UNIVERSITY OF NORTH TEXAS *Denton, TX*

- GPA: 3.6/4.0

Computer Science Studies | GPA: 3.4/4.0 **Aug 2023 - Jul 2024**

STONY BROOK UNIVERSITY *Stony Brook, NY*

Technical Skills

- **Languages:** Python, Java, JavaScript, C, C++, SQL, Dart, Swift, HTML/CSS
- **Frameworks & APIs:** FastAPI, Flask, React, Node.js, Flutter, REST APIs
- **Systems & Monitoring:** Apache Kafka, FoundationDB, Protobuf, CDC, Prometheus, Structured Logging
- **Databases:** PostgreSQL, MySQL, MongoDB, SQLite
- **Cloud & Tools:** AWS (EC2, S3, CloudWatch), Docker, Kubernetes, Linux, Git, GitHub Actions
- **AI/ML:** PyTorch, TensorFlow, LLaMA, Retrieval-Augmented Generation
- **Testing & Development:** pytest, Unit Testing, CI/CD, Code Reviews, Technical Documentation
